PROFILE SUMMARY

Data-oriented Product Support Professional transitioning to a Data Analyst role. Experienced in managing cloud-hosted and on-premises enterprise architecture suites within the Sparx Systems ecosystem. Demonstrated capability in independently building data assets for self-learning, synthesizing dummy datasets to design interactive Power BI dashboards, clean data in Advanced Excel, and deploy Generative AI prompt pipelines. Skilled at bridging operational metrics with technical insights to drive structured, data-informed decision-making.

KEY SKILLS

Data & Analytics: Power BI, Advanced Excel (Data Cleaning, Pivot Tables, Lookup Functions, Data Modeling)

Databases: MySQL, Microsoft SQL Server

AI & Automation: Prompt Engineering (Claude AI), Windsurf IDE, Workflow Scripting & Automation

Enterprise Tools: Sparx Systems EA, Prolaborate, Pro Cloud Server (PCS), WebEA, GitHub, VS Code

Core Competencies: Data Visualization, Root-Cause Analysis, Cross-functional Communication, Agile Support

PROFESSIONAL EXPERIENCE

Product Support Engineer

6thforce

- Deliver specialized technical support for enterprise modeling platforms including Sparx Systems EA, Prolaborate, Pro Cloud Server (PCS), and WebEA across cloud-hosted and on-premises environments.
- Monitor operational ticketing metrics, executing root-cause analysis on system incidents, software defects, and service requests for corporate clients across APAC, Europe, and North America.
- Analyze configuration logs and deployment pipelines to accelerate troubleshooting, identify systemic trends, and optimize platform availability.
- Authored comprehensive technical help documentation and end-user guides integrated within the Sparx Systems EA Help Package framework to streamline client troubleshooting.

DATA & AUTOMATION PROJECTS

Product Support Performance Analytics Dashboard (Self-Learning)

Tools: Excel, Power BI, Generative AI (Gemini/ChatGPT)

- Dataset Synthesis:** Utilized Generative AI prompt pipelines to synthesize and mock a realistic operational dataset of 2,000+ support ticket logs for hands-on analytical practice.
- Data Preparation:** Ingested, cleansed, and structured the unstructured mock data within Advanced Excel, resolving anomalies to establish baseline workload metrics.
- Granular Segmentation:** Categorized simulated support metrics into key parameters such as Status, Ticket Type (Incident vs. Query), Priority levels, and global Geographies.

- **Interactive Visualization:** Developed a comprehensive Power BI dashboard to evaluate regional trends (identifying simulated high-volume zones like Europe at 20.4%), simulating resource optimization scenarios for shift-planning.

Cloud Upgrade Pre/Post-Validation AI Automator (Professional)

Tools: Claude AI, Windsurf IDE, Python Scripting

- Engineered a generative AI automation pipeline utilizing Claude AI to optimize high-stakes system validation workflows for cloud enterprise migrations.
- Programmed an interactive validation checklist that automatically evaluates environment states before and after application upgrades to proactively flag latent infrastructure errors.
- Integrated an automated screen-capture mechanism to capture video evidence of successful executions, auto-generating clean, audit-ready compliance reports for enterprise clients.

EDUCATION

B.Sc. in Computer Science

St. Joseph's College, Tiruchirappalli

Higher Secondary Certificate (HSC)

St. Joseph's College Higher Secondary School,
Tiruchirappalli

Secondary School Leaving Certificate (SSLC)

KAP Viswanathan Higher Secondary School

LANGUAGES

- **English:** Professional Proficiency
- **Tamil:** Native Speaker
